Vehicle Project Code: The project code is used for internal auditing purposes.

Functional Group: A single letter indicating the functional area of the part's first use;

A = Chassis
B = Body
C = Front Suspension
D = Rear Suspension
E = Engine
F = Transmission
G = Wheels & Tyres
H = Steering
J = Brakes
K = Cooling
L = Fuel System
M = Electrics
P = Heater & A.C.
Q = Clutch
R = Final Drive
S = Exhaust
U = Hard Trim
V = Soft Trim
W = Standard Fixings

Function Code: A four digit code indicating the functional area of the part's first use. See Contents page.

Part Serial Number: A four or three digit number with different sequences for each functional group/code.

Supply Route: The suffix letter is used for procurement purposes by factory personnel.

VEHICLE IDENTIFICATION NUMBER

The Vehicle Identification Number (VIN) is recorded on a bar code label fixed to the area adjacent to the bonnet catch, inside the front engine compartment. The number is stamped on the outboard face of the right hand rear chassis leg. The VIN must be quoted with all parts enquiries. There are two variations of the VIN, one being for Domestic and Export markets other than for the USA, which complies with European Economic Community (EEC) directives, and one for USA which complies with requirements laid down by the National Highway Traffic Safety Association (NHTSA).
The seventeen characters of the VIN are coded as shown on the two pages overleaf:

NOTES

1. Only one serial number sequence is used for all variants of model & market, but the numerical sequence restarts each model year.

2. 1990 Model Year Elan production commenced at VIN serial number 6100. 1991 and 1992 model year serial number sequences start at 6000. 1995 Model Year serial number sequences start at S 6300. Serial numbers alone should never be quoted. Either quote the entire seventeen characters, or prefix the serial number with the model year identifier (character 10). e.g. M 6072

3. For change point identification in this parts list, only VIN characters 10 (model year) and 14 to 17 (serial number) will be listed. e.g.:
   M 6072 ('91 model year, serial 6072)
   R 6200 ('94 model year, serial 6200)

ELAN MODEL HISTORY - '90 M.Y. ONWARDS

The type M100 Elan was produced in what has subsequently become known as 'Series 1' form, between January 1990 and July 1992, and in 'S2' form from July '94 to August '95. S1 models were produced in naturally aspirated (N.A.), non-catalyst turbo, and catalyst turbo form, with driver's side supplementary inflatable restraint (S.I.R.) available for the USA and some other LHD markets. USA type S.I.R. equipped cars used a chassis differing in construction detail at the front, with a correspondingly modified body using a marginally extended nose. The rear body section on these cars also differed in the construction and the attachment of the rear aerofoil, a feature which is referred to as a 'stage 2 ' body.

Note that the N.A. model was produced in RHD U.K. form only, with a total of 129 built, whereas approximately 3,726 turbo (S.E.) cars were produced in various configurations for worldwide markets. All Elan S2 models are non-USA type catalyst turbos, of which there are approximately 800 cars.
The only major specification changepoint is that between S1 and S2 models, but some of the more significant running changes are listed below;

1990 Model Year introduction: January 1990. VIN L 6100

Introduction of 'pod' type single pivot headlamp mechanism: June 1990. VIN L 6300
- The 'frame and flap' or 'opera glass' type headlamp mechanism incorporating seperately pivotted headlamp carriers and cover flaps, was replaced by a system using unitary rear pivotted pods similar to those used on Esprit and Excel models.

1991 Model Year introduction: October 1990. VIN M 6000
- No corresponding specification changes.

Change of rear suspension anti-lift angle: January 1991. VIN M 6644
- Angle of rear lower wishbone changed from 5° to 2½°.

Introduction of Du Pont body painting process: June 1991. VIN M 8110

Introduction of revised soft top hood and door weather seals: July 1991. VIN M 8161

1992 Model Year introduction: October 1991. VIN N 6000
- No corresponding specification changes.

Instrument panel illumination switching: October 1991. VIN N 6251
- Instrument panel lights come on with ignition instead of only with exterior lights.

S2 introduction: July '94. VIN R 6001
- Factory fit alarm/immobiliser, and single key lock operation.
- Lengthened and angled parking brake lever.
- Redesigned centre tunnel trim, seat trim, door trim inserts, fascia badge, Nardi steering wheel.
- Revised roadwheels and tyres, suspension and steering components.
- Revised electrical equipment layout.

1995 Model Year introduction: October 1994. VIN S 6300
- No corresponding specification changes.

IMPORTANT:

The customer must be advised of the Personal Security Code (PSC) that relates to the vehicle at time of installation of a Gemini 1059 Microwave Alarm (dealer fitted), or when taking delivery of a new car, factory fitted with Gemini 5160T Aquilla Alarm.

The onus is on the customer to supply the correct PSC when ordering, as Lotus accepts NO responsibility for lost or incorrect codes.
The Lotus Factory does NOT keep PSC records for dealer fitted alarms.

When ordering replacement transmitters or keys, in the interests of security, please provide FULL Vehicle Identification Number (VIN) & proof of ownership, as well as the correct PSC.

Contact Gemini Alarms direct, for service replacement of any alarm components not listed below.
